

# INBT REU Student Presentations

August 8, 2022 1:00 pm - 3:00 pm ET

Every summer for 12 years, the INBT has welcomed undergraduate students to the Nanotechnology for Biology and Bioengineering Research Experience for Undergraduates (REU) program. Students spend 10-weeks with INBT faculty and mentors heavily engaged in research projects ranging from developing cancer therapies and diagnostic tools to using regenerative engineering to heal the body. They also participate in professional development training, networking activities, and explore Baltimore and other surrounding cities. We welcome you to join us to see presentations by our 2022 summer students as they showcase their research projects.

**This event is hybrid. Space is limited in Malone Hall G33/G35 to 35 people. If space is unavailable we ask you to join by Zoom.**
