Survey Sampling Strategies: Geospatial Sampling with the Simple, Spatial, Survey Method (S3M)

20 July 2021 | 9:00-10:00 am ET / 2:00 - 3:00 pm WAT

Household surveys are a primary source of nutrition data in many countries. Fundamental decisions about survey sampling have big implications for cost and use of data. This DfN webinar series examines different methods for household survey sampling and why they may be preferred for different use cases. During the first webinar of the series, speaker Mark Myatt (Brixton Health) will showcase S3M, an area-based sampling method. His presentation will share how S3M can be used to assess risk of micronutrient deficiency, program targeting efficiency and program coverage among other indicators as well as share examples from a study conducted in Sudan. Q&A moderated by Rebecca Heidkamp (JHSPH) will follow the presentation.

Participate in the webinar by registering for the Data for Nutrition Community of Practice (www.datafornutrition.org).
